Abstract

Since 1996, Jóvenes Nucleares has been the Spanish Nuclear Society Young Generation Network. Over the past year, Jóvenes Nucleares has remained dedicated to advancing public understanding of nuclear science and technology. We strive to make this field more approachable and transparent while maintaining the highest standards of rigor. Once again, we have exceeded our objectives, reaching an increasingly broad and diverse audience. This success stems not only from the variety of activities we have organized at both national and international levels but, above all, from their quality.

In this work, we present the successful story of Jóvenes Nucleares, highlighting the positive reception of our most emblematic activities and introducing new events, formats, and collaborations. We believe scientific outreach is essential to promote the reflection on the role of nuclear energy in a sustainable energy mix. Sharing the strategies that have worked - and those that have not - is crucial in effectively raising awareness of the nuclear sector, as its role in energy discussions becomes increasingly prominent.

FISA/EURADWASTE 2025 provides an ideal platform to further this mission, and Jóvenes Nucleares is excited to share its experiences and contribute to advancing communication in nuclear science and technology.
